Eddie Wuerthele	**Urgent**	**Not Urgent**
Important	**Do - (Your MVP)** ● Take a list of words and put them into a word search grid in the terminal ● Create an answering method where users input the word they think they found and the coordinates of the word ● Users can choose one of a few set word lists and it generates a grid ● Allow users to create their own lists of 9 words to make a puzzle ● Make sure custom words aren't over the maximum word length	**Schedule - (For V2.0+)** ● Allow users to save their custom lists so they can make new puzzles if they want ● Create a version like GeoEarthling's Search and Reveal quizzes on Sporcle, where only one word can be found in each of the 9 boxes (one box getting added after finding each word) ● Create an answering method for this where user just has to input the word that is now available ● Allow for customizable grid size of the search and reveal (like instead of 5x5 can have 4x4, instead of big 3x3 can have 2x4) ● Create a custom color for the grid ● Add color to the words that have been found ● Create a setting where users select whether they want words to overlap or not ● Make it into a website instead of just the terminal ● Have a stopwatch ● Create a time limit mode ● Allow for customizable grid size ● Create links/codes to share an exact puzzle with others to compare times ● Have a daily puzzle ●

Not Important	**Delegate - (Use a library)** ● Use an npm package for the word search generation itself ● https://www.npmjs.com/package/@blex41/word-search ● npm Cli-table3 will draw a clean grid ● npm Picocolors will color in the words I have found	**Delete - (Cut it)** ● Play a sound when you get a word correct ● Animate each word found ● Make a multiplayer mode
